

ABSTRACT

A recycling device and a method of using same are disclosed. The recycling device includes the interconnected components of a housing unit, a first door, a second door, an elongated barrel, an electrical plug, a utility motor, a utility belt drive, a rolling pin, a conveyor belt, a plurality of intake rollers, a shredding blade, a receiving bucket, a hydraulic press, a compression piston, and a control panel. The method of using the device includes a convenient means for recycling a plurality of various types of materials, in which the method includes the steps of obtaining and plugging.
